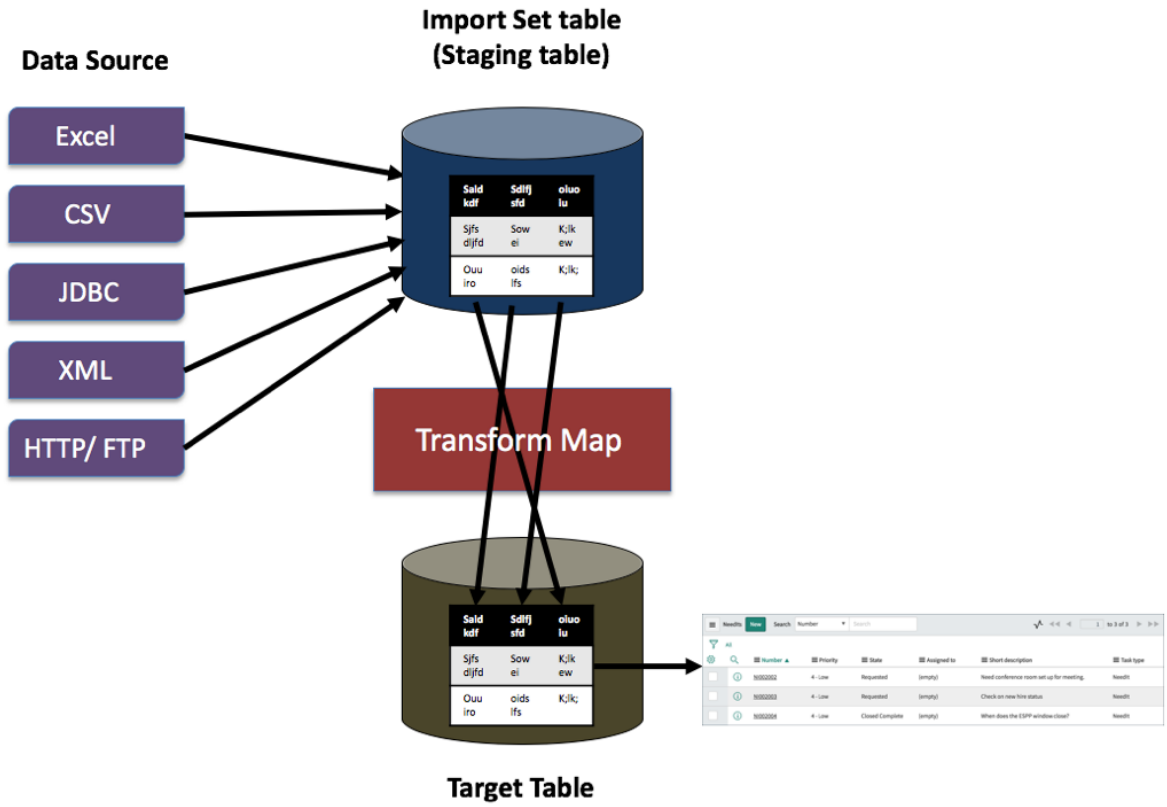
ServiceNow Application Developer

Importing Data > Data Import Process

Data is not imported directly from a Data Source into the target table. The steps are:

1. Load Data into a staging table
2. Create Transform Map
3. Run Transform to move data from the staging table to the target table
4. Check data integrity



Use Studio to create Data Sources. All other data import operations are done in the main ServiceNow browser window and are not captured as part of a scoped application.
