Importing Data > Verify the Data Integrity

The last step in importing data is to verify the records contain the expected data in the expected format. The first place to look is the import set. Click the **ISET001XXXX** link in the *Next steps....*

In the *Import Set* record, scroll to the **Import Set Runs** section (tab). Verify the expected number of records were inserted. If records were ignored or skipped, research is required to determine why.

Switch to the **Import Set Rows** section (tab). Hover over the **Preview** icon () to see the imported data. The *Preview* icon does not show the complete record; it shows only the imported data. Click the **Open Record** button to see the complete record.

The imported *NeedIt* records have no data in mandatory fields such as *Requested for email* and *When needed*. When a user opens the record in a form, they must add values to the mandatory fields before they can save the record. To require values in mandatory fields during imports, set the *Enforce mandatory fields* value to *All Fields* or *Only Mapped Fields* when configuring the Transform Map.
