

ServiceNow Application Developer

Server-side Scripting > Exercise: Save Your Server-side Scripting Work (Optional)

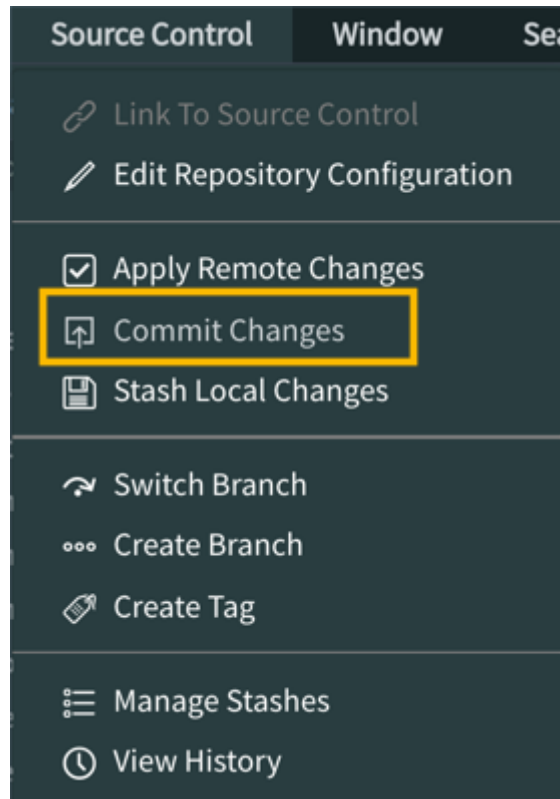

In this exercise, you will save the work you have done in this module to your GitHub repository.

NOTE: For more details about connecting to GitHub, visit the [GitHub and ServiceNow section \(https://developer.servicenow.com/app.do#!/program/faq?q=github_and_servicenow\)](https://developer.servicenow.com/app.do#!/program/faq?q=github_and_servicenow) of the Developer Program FAQ.

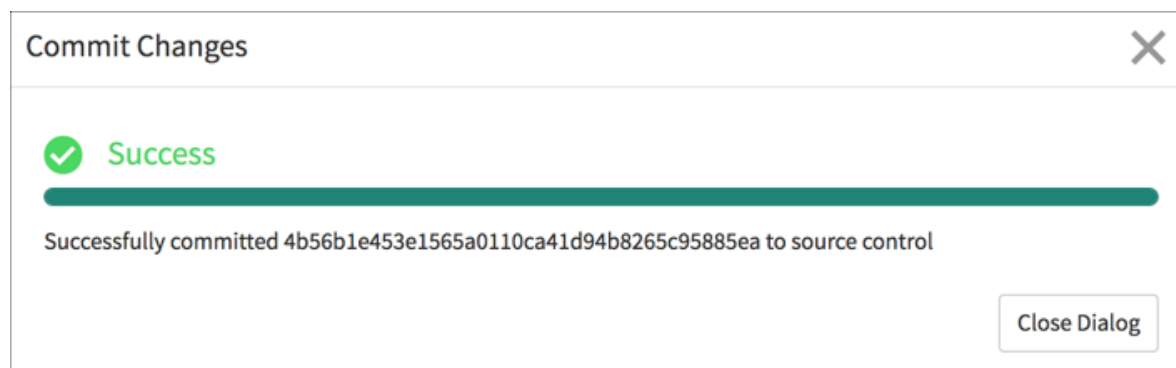

Commit Changes

1. If the *NeedIt* application is not open in Studio from the last exercise, open it now.
 - a. In the main ServiceNow browser window use the Application Navigator to open **System Applications > Studio**.
 - b. In the *Select Application* dialog, click the **NeedIt** application.

2. Open the **Source Control** menu and select the **Commit Changes** menu item.

3. In the *Commit Changes* dialog, enter a *Commit Message* such as **Server-side Scripting Exercises Completed**.
4. Click the **Commit Changes** button.
5. When the *Commit Changes* dialog reports success, click the **Close Dialog** button.

IMPORTANT: If you are unable to write to the repository, it is likely you connected Studio to the ServiceNow repository, which is read-only. Connect Studio to your forked version of the *devtraining-needit-madrid* repository to have both read and write privileges. Your forked version of the repository has a URL like <https://github.com/YourGitHubUser/devtraining-needit-madrid> (<https://github.com/YourGitHubUser/devtraining-needit-madrid>).
