ServiceNow Application Developer

Securing Applications Against Unauthorized Users > Securing Applications Against Unauthorized Users Objectives

In this module, you will learn to:

- Create and use roles and groups

- Impersonate users to test authorizations

- Allow access to applications and modules

- Use Access Controls to protect table records from unauthorized access:

    - Create

    - Read

    - Update

    - Delete

- Debug Access Controls

- Use methods from the ServiceNow API to script security
