ServiceNow Application Developer

Securing Applications Against Access from Other Applications > Securing Applications Against Unauthorized Applications Module Recap

Core concepts:

- *Runtime Access Tracking* manages script access to resources from other applications

    - Table

    - Script Include

    - Scriptable

- Runtime Access settings are:

    - None

    - Tracking

    - Enforcing

- *Application Access* controls which scope(s) can perform database operations against application tables:

    - This application scope only

    - All application scopes

- *Application Access* restricts database operations:

    - Can read

    - Can create

    - Can update

    - Can delete

- Can disable table access by web services

- Restrict whether out-of-scope applications can create application files:

    - Business Rules

    - New fields

    - Client Scripts

    - UI Actions
