CLIENT-SIDE JAVASCRIPT

Client-side additions (such as window and history)

Core JavaScript

Core language features (such as variables, functions, and LiveConnect)

Client-side

Server-side additions (such as server and database

Server-side

SERVER-SIDE JAVASCRIPT

The *core* contains a set of core objects, such as the `Array` and `Date` objects. It also defines other features such as its expressions, statements, and operators. Although server-side and client-side JavaScript use the same core functionality, in some cases they use them differently.

Client-side encompasses the core language plus extras such as the predefined objects only relevant to running JavaScript in a browser.

Server-side encompasses the same core language plus extras such as the predefined objects and functions only relevant to running JavaScript on a server.
